5.2. Calculate resistance in series and parallel circuits.
 5.3. Explain patterns in resistance using words.
 6.3. Explain how resistances change in thermistors and LDRs. (triple)

7. The total resistance of this parallel circuits is:

- Select your answer from:
- Less than 30Ω because...
 - More than 30Ω because...
 - Less than 20Ω because...
 - More than 20Ω because...

8. Explain how the total resistance is calculated differently in series and parallel circuits.
- 9.
- a) Explain how the resistance of a thermistor changes with temperature.
 - b) Explain how the resistance of an LDR changes with light intensity.

1.1. Explain the law of conservation of energy.
 1.2. Describe the concepts of open and closed systems.
 2.1. Calculate efficiency.
 3.3. Explain how energy resources are used.
 4.4. Predict the current at given points within a series and parallel circuit.
 4.5. Predict the potential difference (voltage) at given points within a series and parallel circuit.

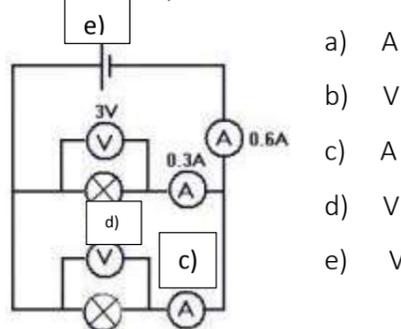

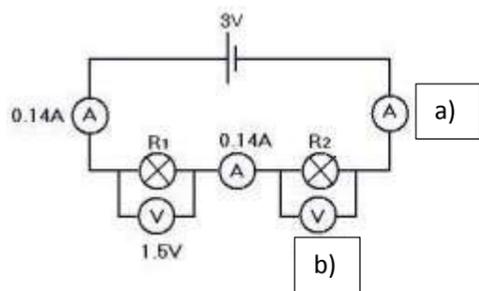

5.1. Compare and contrast series and parallel circuits.
 6.2. Describe the relationship between current and potential difference in ohmic conductors. (triple)

1. Define the law of conservation of energy.
2. Is a bicycle an open or closed energy system? Explain why.
3. Calculate the efficiency of these devices:

Device	Useful Energy Output (J)	Total Energy Input (J)	Efficiency (%)
Kettle	20	80	
Bulb	5	25	
Speaker	64	80	
Washing Machine	2500	3600	

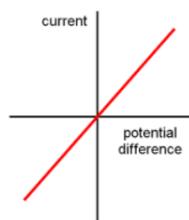

4. Explain how these energy resources work to generate electricity:
 - a) Geothermal energy.
 - b) Biofuel energy.
 - c) Nuclear power.
 - d) Fossil fuels.
 - e) Solar power.
 - f) Hydroelectric power.
 - g) Tidal power.
 - h) Wave power.

5. State the missing voltages and currents in the series and parallel circuits.

- a) A
- b) V
- c) A
- d) V
- e) V

6. Explain the difference between series and parallel circuits.
7. Explain how current and potential difference are linked in conductors that obey Ohm's Law, such as in this fixed resistor.

	<p>1.3. Describe ways to reduce unwanted energy transfers.</p> <p>6.4. List the applications of thermistors and LDRs. (triple)</p> <p>4.2. Define current, charge and potential difference.</p> <p>4.6. Describe the relationship between current, potential difference and resistance.</p>	<p>1.</p> <p>a) Describe one way to reduce the amount of wasted energy produced from a bicycle.</p> <p>b) Describe two ways to reduce the amount of wasted energy released from a house.</p> <p>2. Match up the use to the component:</p> <table border="1" data-bbox="619 430 1921 652"> <tr> <td>Thermostat to control heating in a house.</td> <td>LDR</td> </tr> <tr> <td>Volume control on headphones.</td> <td>Thermistor</td> </tr> <tr> <td>Car headlights that switch on automatically when it gets dark.</td> <td>Variable Resistor</td> </tr> </table> <p>3. Write definitions for these words:</p> <p>a) Current.</p> <p>b) Charge.</p> <p>c) Potential difference.</p> <p>4.</p> <p>a) Write down Ohm's law in a sentence</p> <p>b) Write down the Ohm's law equation. Describe what each of the symbols means.</p>	Thermostat to control heating in a house.	LDR	Volume control on headphones.	Thermistor	Car headlights that switch on automatically when it gets dark.	Variable Resistor										
Thermostat to control heating in a house.	LDR																	
Volume control on headphones.	Thermistor																	
Car headlights that switch on automatically when it gets dark.	Variable Resistor																	
	<p>3.1. Describe the main energy resources on Earth.</p> <p>3.2. Define renewable and non-renewable resources.</p> <p>4.1. Identify the key circuit symbols.</p> <p>4.8. Recall units for current, potential difference and resistance.</p>	<p>1. Name five energy resources that can be used to make electricity.</p> <p>2. Write definitions for:</p> <p>i) Renewable resources.</p> <p>ii) Non-renewable resources.</p> <p>3. Draw diagrams to show these circuit symbols:</p> <p>a) Variable resistor</p> <p>b) LED</p> <p>c) Diode</p> <p>d) Thermistor</p> <p>e) Cell</p> <p>f) Battery</p> <p>g) LDR</p> <p>h) Voltmeter</p> <p>i) Ammeter</p> <p>j) Fuse</p> <p>k) Bulb</p> <p>l) Resistor</p> <p>m) Switch</p> <p>4. Complete the table to show the symbols and units for these quantities.</p> <table border="1" data-bbox="661 1780 1953 1929"> <thead> <tr> <th>Quantity</th> <th>Symbol</th> <th>Unit</th> <th>Symbol for the Unit</th> </tr> </thead> <tbody> <tr> <td><i>Current</i></td> <td></td> <td></td> <td></td> </tr> <tr> <td><i>Potential Difference</i></td> <td></td> <td></td> <td></td> </tr> <tr> <td><i>Resistance</i></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>	Quantity	Symbol	Unit	Symbol for the Unit	<i>Current</i>				<i>Potential Difference</i>				<i>Resistance</i>			
Quantity	Symbol	Unit	Symbol for the Unit															
<i>Current</i>																		
<i>Potential Difference</i>																		
<i>Resistance</i>
